

All AccuDock work floats have a non-skid UV resistant surface and are manufactured using expanded EPS foam encased in HDPE flat sheets providing a safe, comfortable and stable work surface. AccuDock work floats are perfect for a variety of residential and commercial uses such as repairing, cleaning or painting a boat.

### **What is an AccuDock Work Float made out of?**

Each float consists of a high density polyethylene (HDPE) plastic, which completely encapsulates a block of EPS foam.

### **What is the surface texture?**

The surface is the same plastic as the sides and bottoms. It is a non-skid levant texture finish which is a slightly raised texture providing excellent traction. The surface is not slippery when wet and because of the white color, it is cool to the touch even during hot summer months.
